Mounting instructions

**Preparation for ceiling- or wall mounting**

For the mounting plate to sit flush to the ceiling/wall, the screws need to be flush with the surface. To achieve this, please use the included self-drilling screws. Depending on the surface material, you can use the included drill template to mark the position of the two holes.

**Mounting to other surfaces**

For mounting the device to other surfaces than described in this document, you may need different mounting accessories (screws, dowels, etc.). Pre-drilling may not be necessary when using included accessories.

**Mounting plate**

- Place the mounting plate (A) to a wall, ceiling or other surface in your desired location, insert the screws (B), then additionally use the spacers (C). Tighten the screws clockwise until the mounting plate rests flush to the surface.
- With the access point (D) attached, mount it to the previously mounted self-drilling screws.
- Then twist the access point clockwise until it clicks into place.
- When the access point is fixed to the mounting plate, the screws (E) can be screwed through the holes in the mounting plate to fix the access point to the ceiling/wall.

**Mounting the access point**

- Ceiling mounting to a non-ceiling

  1. Fixing the access point to the mounting plate
  2. The screws (E) are now locked in their end positions.

- Select the correct size of T-rail brackets (F) and the screws (G) as described in chapter 2.8, or your own mounting material to fix the mounting plate to the T-rail Brackets.

- The screws (G) are now locked in their end positions.

- Wall mounting with mounting plate

  1. To fix the access point (D) to the mounting plate (A), first attach the access point (D) to the previously mounted self-drilling screws (E) and the screws (G) as described in chapter 2.8, or your own mounting material to fix the mounting plate to the T-rail Brackets.

- The screws (G) are now locked in their end positions.

**Mounting to a drywall ceiling**

- Mounting the access point to the ceiling

  1. Place the access point (D) on the ceiling by inserting the attached screws (B) into the appropriate holes of the access point.
  2. Tighten the screws clockwise until the mount is flush to the ceiling.

- Fixing the access point to the ceiling mount

  1. The screws (E) are now locked in their end positions.

- Wall mounting with mounting plate

  1. To fix the access point (D) to the mounting plate (A), first attach the access point (D) to the previously mounted self-drilling screws (E) and the screws (G) as described in chapter 2.8, or your own mounting material to fix the mounting plate to the T-rail Brackets.

- The screws (G) are now locked in their end positions.
