

# LANCOM Advanced VPN Client macOS

Universal VPN Software Client for secure corporate network access  
when traveling

The LANCOM Advanced VPN Client provides mobile employees with encrypted access to the company network, whether they are at their home office, on the road, or even abroad. The application is extremely easy to use; once VPN access (virtual private network) has been configured, a click of the mouse is all it takes to establish a secure VPN connection. Further data protection comes with the integrated stateful inspection firewall, support of all IPSec protocol extensions, and numerous other security features.

IPSec VPN Client for macOS

Integrated stateful inspection firewall for secure internet access

Prioritization of Voice over IP

IPSec over HTTPS (based on NCP VPN Path Finder Technology)

Support of IKEv2

Support of dual stack (IPv4/IPv6)

Biometric authentication

# LANCOM Advanced VPN Client macOS

## **Secure company network access when traveling**

The LANCOM Advanced VPN Client for macOS provides users with a secure VPN tunnel to access the company network. No matter whether the user is mobile on the road, in the home office, or even abroad — the LANCOM Advanced VPN Client provides a secure channel to the company network, anytime and anywhere.

## **Maximum data security**

Equipped with a stateful inspection firewall, the LANCOM Advanced VPN Client automatically detects secure and unsecure networks for protected communication at all times. Together with other security features such as the support of all current IPSec protocols, digital certificates, and many more, the client ensures that all data are securely transmitted at all times.

## **Fast and easy configuration thanks to the Setup Wizard and "1-Click-VPN"**

The integrated Setup Wizard in LANconfig supports the user with fast and easy VPN configuration. Once the VPN connection is established intuitively with a single click.

# LANCOM Advanced VPN Client macOS

## Operating systems

Apple	macOS 15 Sequoia macOS 14 Sonoma macOS 13 Ventura macOS 12 Monterey macOS 11 Big Sur
-------	--

Languages	German, English
-----------	-----------------

## Communication

Connection management	Communication only via secured VPN tunnel or with simultaneous unsecured Internet access. Manual or automatic connection establishment, adjustable hold-times with automatic connection establishment, time and connection limit with warning.
-----------------------	--

Connection types	VPN connection over existing IP connection (LAN / WLAN)
------------------	---

Protocols	All IP-based protocols, IPv4/IPv6 dual stack
-----------	--

## VPN/IPsec

Standards	Standard-conform IPsec with ESP (Encapsulation Security Payload) and/or AH (Authentication Header)
-----------	--

FIPS inside	The IPsec client integrates a cryptographic algorithm conformant to the FIPS standard. The embedded cryptographic module is certified according to FIPS 140-2 (Certificate #1051). FIPS conformance will always be maintained when any of the following algorithms are used for establishment and encryption of the IPsec connection: Diffie Hellman Group: Group 2 or higher (DH starting from a length of 1024 bits) Hash Algorithms: SHA1, SHA 256, SHA 384, or SHA 512 Bit Encryption Algorithms: AES with 128, 192 or 256 Bit or Triple DES
-------------	--

Encryption	AES-CBC/AES-CTR/AES-GCM (128, 192 or 256 bit), 3-DES (168 bit), RSA (1024 or 2048 bit)
------------	--

Hashes	SHA-512, SHA-384, SHA-256, SHA-1, MD-5
--------	--

IKE operating modes	IKE with pre/shared keys or certificates, IKE Main or Aggressive Mode, IKEv2, DH groups 1, 2, 5, 14-21, 25-30, Re-keying after adjustable transfer volumes or time. In combination with LANCOM VPN remote sites, an IKE extension enables separate pre-shared keys to be used for each user in Aggressive Mode as well.
---------------------	---

Network coupling	Coupling of IPv4 networks via IPv4/IPv6 WAN connections, coupling of IPv6 networks via IPv4/IPv6 WAN connections
------------------	--

## Additional functions

IPsec over HTTPS	To overcome VPN filter (e.g. port 500 blocking for IKE). LANCOM VPN router and gateways with LCOS 8.0 or higher needed. IPsec over HTTPS is based on the NCP VPN Path Finder Technology.
------------------	--

XAUTH	For authentication by username/password
-------	---

IKE config mode	For assignment of IP parameters (local IP address, DNS and WINS server) to the client
-----------------	---

IPCOMP	IPCOMP data compression (LZS and Deflate) for optimal bandwidth exploitation
--------	--

Dead-Peer-Detection	Dead-peer detection (DPD) for connection monitoring
---------------------	---

# LANCOM Advanced VPN Client macOS

## Additional functions

IKEv2 redirect	Support for IKEv2 redirect according to RFC 5685
IKEv2 Split-DNS	Split-DNS allows the DNS resolution of internal domains, i.e. "*.company.com" via an existing VPN tunnel, whereas all other DNS requests will be send to a public DNS server.
NAT-Traversal	NAT-Traversal (NAT-T) to overcome routers not capable of IPSec masking, or when using AH
RAS user template	Configuration of all VPN client connections in IKE ConfigMode via a single entry in the LANCOM VPN gateway
EAP-MD5	For extended authentication of layer-2 devices such as switches or WLAN access points
Biometric authentication	Secure against unauthorised access by third parties via biometric authentication (fingerprint detection).
macOS keychain support	A user certificate can be configured within the computer certificate configuration for usage in macOS keychain.

## PKI

Certificates	Public Key Infrastructure according to X.509v3, Entrust SmartCards: PKCS#11, TCOS 1.2 and 2.0 over CT-API or PC/SC Soft certificates: PKCS#12
Certificate extension	Control of, and notice about, a certificate's validity period
Certificate revocation lists (CRL)	Control of the CRL and ARL (Certificate and/or Authority Revocation List)

## Firewall

Stateful inspection Firewall	Stateful inspection firewall for IPv4 and IPv6, direction-dependant packet filter with IP- and port ranges per protocol, LAN-adapter protection to protect PCs with active VPN connections from attacks from other LAN users, IP broadcast and NetBIOS/IP filter
------------------------------	--

## Installation

Wizards	Tailor-made Setup Wizards are available for all types of connection
---------	---

## Administration

Password protection	Password protection for configuration and profile management, configuration rights can be defined for each function area, display/hide parameter fields
Network diagnostics	Easy checking of internet accessibility through PING and DNS request

## Activation / Deactivation

Online/offline activation	After installation, the software will function for a period of 30 days. Activation must take place within these 30 days. This can be conducted either directly online (requiring Internet access from the corresponding computer) or offline (requiring Internet access from any other computer). Activation is anonymous. No user-specific data of any kind is transmitted.
License	The licenses for the LANCOM Advanced VPN Client are single-device licenses and may only be activated and operated on one system at a time.

## Updates

**Update** An update to a later version is generally available for free and can be carried out without purchasing a new license key. An update provides all of the previous bugfixes from earlier versions.

**Upgrade** With an upgrade to the current version, users of older versions can take advantage of the new features in the current version. An upgrade is subject to a fee and requires a new upgrade license key to be purchased, along with a new activation. Upgrades are only possible with a maximum of 2 software versions between the version that was activated originally and the current version. Please visit [www.lancom-systems.com/avc-mac](http://www.lancom-systems.com/avc-mac) for details.

## Support

**Support** Support via Internet

**Service** 30-day demo version from [www.lancom-systems.com](http://www.lancom-systems.com)

## Package content

**Manual** Printed Quick Installation Guide (DE/EN)

**Key** Printed license key
