

NETWORKING OF 8,800 LOCATIONS

OUR SOLUTION

- › The network will be rolled out and monitored largely automatically using software-defined networking (SDN) technology based on the LANCOM Management Cloud (LMC)
- › One IPsec VPN router per site handles all digital communication (data transmission, telephony, Internet connection, etc.)
- › Two LANCOM vRouters operate as peers to the LMC

CUSTOMER BENEFITS

- › German technology guarantees protection of sensitive customer data through high security and privacy standards
- › New locations are quickly and securely integrated into the company network via the LMC with just a few mouse clicks
- › Reduced costs and effort of management and monitoring thanks to the LMC

ecotel communication ag

Joint realization of the project for well-known German customers

Components: 8,800 LANCOM VPN Router

Project: LANCOM and ecotel to build one of the largest SD-WANs in Europe
