LANCOM ISG-5000

Secure site connectivity for medium-sized SD-WAN enterprise scenarios

The LANCOM ISG-5000 is the central instance for your high-performance SD-WAN in large enterprise infrastructures. 100 integrated VPN channels based on state-of-the-art encryption technologies and demand-oriented ports (6x Gigabit Ethernet, 2x SFP+, 2x USB, RJ45 config port) deliver the best possible conditions for networking mobile employees, protecting internal company data, and taking high-performance IPSec connectivity to sensitive network segments or branches. The LANCOM VPN option upgrades the gateway to support up to 1,000 VPN channels. This ensures that your network is perfectly scalable and can grow on demand—without needing additional hardware.

Powerful SD-WAN greatly simplifies the management of enterprise structures

In combination with the LANCOM Management Cloud, the LANCOM ISG-5000 provides the ideal basis for establishing a high-performance SD-WAN. For instance, it enables the highly automated configuration of a wide area network and an automatic rollout of device configurations to your individual locations. You benefit from highest levels of scalability, save on personnel costs, and keep track of the status of your network 24/7—ideal for mid-sized enterprise scenarios with multiple locations.

Next-generation SD-WAN: High Scalability VPN (HSVPN)

The LANCOM ISG-5000 supports High Scalability VPN (HSVPN). The ongoing rise of digitalization, greater diversity of applications, and higher data volumes demand powerful, state-of-the-art networks. High Scalability VPN significantly improves the extensibility and efficiency of your architecture. Where previously each individual application required a separate VPN tunnel, HSVPN bundles any number of networks into a single VPN tunnel and transports them collectively to the remote site—with each network remaining secure and strictly separated from the others. The advantage for your business: Considerably fewer VPN tunnels are required, and recovery times are much faster in a failover event.

Maximum port flexibility

From fiber-optic to Ethernet and USB ports: As the core of the network, this integrated services gateway offers 6 Gigabit Ethernet ports as well as 2x USB. In addition, thanks to 2 SFP+ ports with 10 Gigabit, you can increase the capacity of your data transfers to servers, network storage or switches.
