LANCOM LN-1700B

Dual concurrent Wi-Fi with up to 1733 Mbps

The LANCOM LN-1700B features two Wi-Fi radio modules, one offering IEEE 802.11ac Wave 2 and the other offering IEEE 802.11n. This provides fast Wi-Fi to 11n-clients in the 2.4-GHz frequency band and also the growing number of modern 11ac-enabled devices in the 5-GHz band.

Integrated beaconing technology

The Bluetooth Low Energy radio module integrated into the LANCOM LN-1700B is the technical basis for modern BLE Beaconing applications such as push advertisement services to mobile devices (iBeacon). With future firmware updates additional services like asset tracking / management can be realized via partner solutions.

4x4 multi-user MIMO

Multi-user MIMO (MU-MIMO for short) simultaneously distributes all of the available spatial streams of the LANCOM LN-1700B between several different Wave 2 clients, rather than one after the other as was formerly the case. The available bandwidth is used efficiently and delays in the wireless network are substantially reduced.

160-MHz channel width

Increasing the channel width from 80 to 160 MHz doubles the performance for Wave 2 clients. By optimizing the use of the radio spectrum, a client can be supplied with a data rate of up to 1733 Mbps.

Active Radio Control for dynamic radio-field optimization

The LANCOM LN-1700B supports the Wi-Fi optimization feature LANCOM Active Radio Control. This intelligent combination of innovative features included with the LCOS operating system—such as Spectral Scan, Band Steering, Adaptive Noise Immunity, Adaptive RF Optimization, Airtime Fairness, and Client Steering—sustainably increases Wi-Fi performance and supports administrators with professional tools for Wi-Fi management.

LANCOM security for wireless networks

With numerous integrated security features such as IEEE 802.1X, this enterprise-class access point provides optimal security for networks. Administrators and employees alike benefit from professional security policies on the network.

Managed via LANCOM Management Cloud, WLAN controller, or stand-alone

The LANCOM LN-1700B offers the greatest possible versatility in operation: Managed through the LANCOM Management Cloud, it integrates into a holistic, automated network orchestration system based on software-defined networking technology. It is also able to operate with central management by LANCOM WLAN controller or even in stand-alone mode.

LANCOM LN-1700B

Maximum freedom of design for guest Internet access

The LANCOM Public Spot option provides reliable and secure Internet access for guests, visitors, partners or customers, all based on a common infrastructure. The guest network is at all times strictly and securely separated from the internal network. There is no need for any additional hardware components, which makes the LANCOM Public Spot option the ideal solution for the provision of secure hotspots.
