# LANCOM R90X Enterprise Option

## Feature upgrade for your LANCOM VoIP routers of the R90X series

Growing networks go hand in hand with increasing demands on the functions of individual network components - in best case without the need to invest in new hardware. In order to be able to react flexibly to changing requirements, the LANCOM R90X Enterprise Option is a software upgrade that offers you a cost-effective, fast and flexible expansion of your existing VoIP routers of the LANCOM R90X series. This increases the number of your existing 3 IPSec VPN channels to 5 VPN tunnels and expand the possibilities of network virtualization eightfold from 2 to a total of 16 ARF networks. For even more security and optimal scalability, the upgrade option also includes the activation of the enterprise routing protocols BGP and OSPF. In addition, the LANCOM R90X Enterprise Option upgrades the router to a fully-fledged SD-WAN gateway including zero-trust and cloud-managed security functions. If you need even more IPSec VPN channels for your network, you can also use the LANCOM VPN-25 Option after activating the LANCOM R90X Enterprise Option to extend your channels from 5 to 25.

→ Software upgrade for the LANCOM routers of the R90X series
→ Extension from 3 to 5 IPSec VPN tunnels
→ Extension from 2 to 16 ARF networks
→ Activation of the Enterprise Routing protocols BGP and OSPF
→ Additional upgrade to 25 VPN channels possible with the LANCOM VPN Option
