

LANCOM Analog Adapter Set

Upgrade your LANCOM VoIP router to four analog connections

With this practical adapter set you can upgrade your LANCOM VoIP router model with integrated analog interfaces from two (standard delivery) to four analog connection options. The VoIP routers come with two RJ11 sockets to which the two analog adapters supplied (RJ11 to TAE) can be connected. The kit, consisting of two RJ11 twin adapters and two TAE adapters (RJ11 to TAE), will thus enable you to connect four analog end devices in the future.

- Set is available for these models: LANCOM 1793VA, 1793VAW, 1793VA-4G, 1793VA-4G+ and 883+ VoIP
- 2x RJ11 twin adapters for extending the two RJ11 sockets of the LANCOM VoIP router
- 2x TAE adapters (RJ11 to TAE) for extending to four analog TAE connection options (2 of these adapters are included in the delivery of the LANCOM VoIP routers)

LANCOM Analog Adapter Set
