

Connected Health Ecosystem: Secure network solutions for the healthcare sector

Directive-compliant IT security engineered in Europe
for a trustworthy digital healthcare network

In the healthcare sector, digital networking is mainly used for the exchange of information and cooperation between healthcare providers. In the process, government requirements concerning digitalization and the European NIS-2 directive ensure the highest level of network security.

As a German manufacturer of security and network solutions, LANCOM offers maximum compliance, cyber security, and digital sovereignty with the LANCOM Connected Health Ecosystem.

Legally and technically on the safe side:

With the Health IT Infrastructure solutions
from LANCOM

- Setup and support by network experts
- Compliance with official security requirements, NIS-2, etc.
- Flexibly rentable or purchasable state-of-the-art IT infrastructures

LANCOM Health IT Infrastructures for individual healthcare facilities:

With the right IT environment, healthcare facilities are able to operate securely within digital patient care. The LANCOM solutions can be rented for three years, allowing the best possible digitalization utilization at constant usage fees.

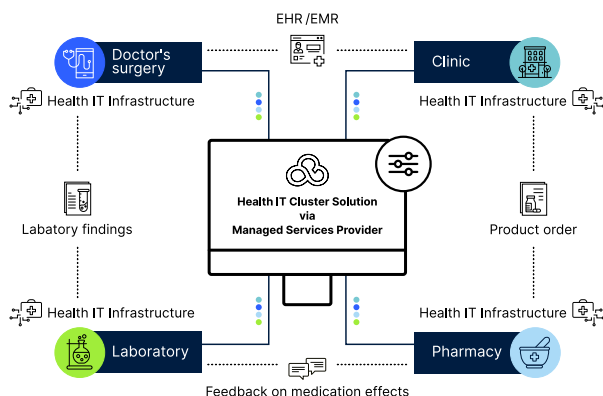

Ideal for: Surgeries, group practices, pharmacies, medical care centers, outpatient care, clinics, etc.

LANCOM Health IT Cluster Solutions for overarching healthcare networks:

The LANCOM cluster solution functions as a closed communication network for the external cooperation between healthcare providers and serves to establish referral and compound networks.

Ideal for: Practice networks, healthcare networks, clinic groups, referral networks, etc.

Connected Health Ecosystem

Your added value with LANCOM

- Compliance with legal requirements on healthcare network security and the European NIS-2 directive
- Secure usage of telemedicine within medical and healthcare networks
- State-of-the-art cyber security and network technology
- Flexibility: monthly or quarterly usage fees
- Efficient and sustainable resource utilization thanks to support from experienced technology partners
