PRESS RELEASE 2013-386

Version 2.32 for 32- and 64-bit Windows 8.1

New LANCOM VPN client now supports Windows 8.1

Aachen, November 19, 2013—**LANCOM Systems**, the leading German manufacturer of professional network solutions, supports Windows 8.1 with the latest version 2.32 of their IPSec-based *Advanced VPN Client*. Another special feature: Even with an IPv6 Internet connection, the client is still able to establish an IPv4 VPN tunnel to the remote station. This allows for a smooth migration from IPv4 to the IPv6 protocol not only on the gateway side but on the client side as well. This is particularly interesting for Internet connections without a public IPv4 address from the provider.

What's more, the VPN client transmits data over 3G/4G connections by means of the "Windows Mobile broadband interface" to ensure the maximum possible data transfer rates. The software also supports seamless roaming so that it can automatically switch between different networks (e.g. between WLAN and 3G/4G). This ensures that online applications, such as remote desktop connections, can survive a change of connection without the VPN client disconnecting.

It goes without saying that the program includes a personal firewall. This allows firewall rules to be directly enabled or disabled at the click of a mouse. Creating

pre-defined rules is just as easy. Furthermore, the interface allows rules to be defined for data transmission with the IPv6 protocol.

This client works with all current 32-bit and 64-bit versions of Windows. The advantage for companies is clear: Even with heterogeneous infrastructures, professionals can work with a single, universal client to manage remote access. The benefit: Lower costs for administrators, the user help desk, and on training.

The *LANCOM Advanced VPN Client* version 2.32 supports 32- and 64-bit versions of Windows XP, Vista and Windows 7, 8, and 8.1, and it is available now. Customers who already operate the Advanced VPN Client 2.3 can upgrade to version 2.32 free of charge.

A 30-day demo version is available for download from the LANCOM web site.

LANCOM Systems background:

LANCOM Systems GmbH is the leading German manufacturer of reliable, innovative network solutions for business customers. LANCOM's two business units, VPN Network Connectivity and Wireless LAN, offer professional users secure, flexible infrastructure solutions for local-area and multi-site networks. The entire core product range is developed and manufactured in Germany. In addition, LANCOM also provides VPN solutions certified by the German Federal Office for Information Security (BSI) for the protection of particularly sensitive networks and critical infrastructures (EPCIP) against cyber attacks. LANCOM Systems has its headquarters in Würselen near Aachen, Germany, and other offices are located throughout Europe. Customers include small and medium-sized enterprises, government agencies, institutions, and major corporations from Germany, Europe and increasingly worldwide. The enterprise is a partner in the Alliance for Cyber Security initiated by the BSI.
