

Press Release 2021-649

Technology partner network continues to grow:

LANCOM Systems and macmon secure cooperate on Network Access Control (NAC)

Aachen, May 17, 2021—The German network infrastructure supplier LANCOM Systems and macmon secure GmbH from Berlin have entered into a technology partnership. macmon offers comprehensive Network Access Control (NAC) solutions that effectively protect networks from unauthorized access. The cooperation between the two German manufacturers ensures optimal interaction between the NAC solution and the LANCOM network infrastructure components.

Both manufacturers have performed extensive interoperability tests to ensure compatibility and the seamless interaction of the macmon solution with the switches and WLAN access points from LANCOM. This creates the core basis for an efficient, identity-based security architecture “Made in Germany” in wired and wireless networks.

The macmon NAC solution detects and monitors network access at companies and organizations to protect from unauthorized access and provide full transparency over the entire network environment at all times. Important rules are adjusted automatically, administrators have a lower workload, and the risk of potential attacks is significantly reduced.

The partnership between LANCOM and macmon secure provides an easy-to-implement, scalable solution for networks of all sizes and degrees of complexity. There is a special focus on security-sensitive areas such as healthcare, administrative networks, research institutions, universities, and industry.

Further information is available from the LANCOM website:

About macmon secure:

The experienced IT experts have been offering manufacturer-independent solutions since 2003, to protect heterogeneous networks from unauthorized access through immediate network transparency. macmon NAC is quick and easy to implement and offers considerable added value for network security. This makes macmon NAC a key component in the areas of IT security, digitalization and mobile office. With its zero-trust network access strategy, macmon secure extends its tried and tested protection to all company resources in the cloud, and is the only provider of NAC plus SDP with identity and access management from Germany, hosted in Germany.

About LANCOM Systems:

LANCOM Systems GmbH is a leading European manufacturer of network and security solutions for business and the public sector. The portfolio includes hardware (WAN, LAN, WLAN, firewalls), virtual network

components, and cloud-based software-defined networking (SDN).

Software and hardware development as well as manufacturing take place mainly in Germany, as does the hosting of the network management. There is a strong focus on trustworthiness and security. The company is committed to products that are free from backdoors and is a holder of the trust mark "IT Security Made in Germany" as initiated by the German Ministry of Economics.

LANCOM was founded in 2002 and has its headquarters in Würselen near Aachen, Germany. Customers include SMEs, government agencies, institutions, and major corporations from all over the world. Since summer 2018, the company has been an independent subsidiary of the Munich-based technology group Rohde & Schwarz.
